The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Laser Scribing Machine market for 2018-2023.

Laser scribing is well suited to the creation of fine lines and other blind features and patterns. Laser energy can be applied to the material in one of two ways, either focused to a small spot and scanned over the surface or imaged through a mask to project the pattern onto the surface. The use of laser scribing allows for very accurate writing of fine features both in the surface of a material and by the selective removal of one or more layers in a multi-layer substrate.

Over the next five years, LPI(LP Information) projects that Laser Scribing Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
