## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Laser Welding Machine market for 2018-2023. Laser welding is a welding technique used to join pieces of metal or thermoplastics through the use of a laser. The beam provides a concentrated heat source, allowing for narrow, deep welds and high welding rates. The process is frequently used in high volume applications using automation, such as in the automotive industry. It is based on keyhole or penetration mode welding.

The three types of lasers commonly used, which are solid-state lasers, gas lasers and fiber laser. The first type uses one of several solid media, including synthetic ruby (chromium in aluminum oxide), neodymium in glass (Nd:glass), and the most common type, neodymium in yttrium aluminum garnet (Nd:YAG). Gas lasers use mixtures of gases such as helium, nitrogen, and carbon dioxide (CO<sub>2</sub> laser) as a medium.

Over the next five years, LPI(LP Information) projects that Laser Welding Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
