Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Laundry Folding Robots market for 2018-2023.

Washing machines and dryers treat each item of clothing the same, but folding requires the appliance to identify garments and be able to physically fold them. Folding a towel is more complicated than it seems, and socks are currently impossible. Engineers at Tokyo-based company Seven Dreamers started developing a laundry-folding robot called Laundroid in 2005 and had their product 'Laundroid' showed off at CSE 2018.

To tackle the tedious task of folding laundry, Laundroid consists of three technologies: Image analysis, artificial intelligence, and robotics. Even though there are multiple robot arms that fold the clothes, they are hidden inside a box that is styled like Italian luxury furniture, made of leather, wood, and glass. The materials are purposefully luxurious since the price point - starting at \$16,000 for the base model - is much higher than most home appliances.

Over the next five years, LPI(LP Information) projects that Laundry Folding Robots will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
