Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lawn Mower Batteries market for 2018-2023. Lawn mower batteries provide the necessary power required for the lawn mowers to mow lawns. These batteries are specifically made for electric, battery operated, and hybrid lawn mowers. Power lawn mowers have evolved from the traditional hand-guided mowers to automatic electric mowers. Advances in technology have led to the development of lightweight power lawn mowers and battery-powered lawn mowers. Cordless electric mowers are powered by a variable number (typically 1–4) of 12-volt, 56-volt, and 80-volt rechargeable batteries. Typically, more batteries mean more run time and/or power (and more weight). Batteries can be in the interior of the lawn mower or on the outside. If on the outside, the depleted batteries can be quickly swapped with recharged batteries. Cordless mowers have the maneuverability of a gasoline-powered mower and the environmental friendliness of a corded electric mower, but are more expensive and come in fewer models (particularly self-propelling) than either. The eventual disposal of worn-out batteries is problematic (though they can be recycled), and the motors in some cordless mowers tend to be less powerful than gasoline motors of the same total weight (including batteries).

Over the next five years, LPI(LP Information) projects that Lawn Mower Batteries will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
