Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Lazy Eye market for 2018-2023.

Lazy eye refers to the drifting or misalignment of an eye. This is usually the manifestation of amblyopia, where one eye is experiencing significant vision loss, and sometimes also strabismus (or “crossed eyes”), a general misalignment problem. The most common cause of lazy eye is strabismus. When the eye muscles aren’t able to align the eyes properly, especially during development, the brain receives a different image from each eye. The confusion is resolved by the brain’s systematically ignoring one of the images. This leaves the eye unused and the corresponding brain area underdeveloped. Another common cause is refractive error (near / farsightedness or astigmatism) that’s greater in one eye. This also leads to mismatched input, then the precedence of one eye that causes the brain to ignore input from the other. Anything that creates this sort of visual imbalance can also cause amblyopia. This includes childhood cataracts, clouded lenses, shape or size differences and other anatomic or structural abnormalities.

Over the next five years, LPI(LP Information) projects that Lazy Eye will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
