## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lepidolite market for 2018-2023.

Lepidolite is a lilac-gray or rose-colored member of the mica group of minerals with formula  $K(Li,Al,Rb)_2(Al,Si)_4O_{10}(F,OH)_2$ . It is the most abundant lithium-bearing mineral and is a secondary source of this metal. It is a phyllosilicate mineral and a member of the polyolithionite-trilithionite series.

It is associated with other lithium-bearing minerals like spodumene in pegmatite bodies. It is one of the major sources of the rare alkali metals rubidium and caesium. In 1861, Robert Bunsen and Gustav Kirchhoff extracted 150 kg (330 lb) of lepidolite and yielded a few grams of rubidium salts for analysis, and therefore discovered the new element rubidium.

It occurs in granite pegmatites, in some high-temperature quartz veins, greisens and granites. Associated minerals include quartz, feldspar, spodumene, amblygonite, tourmaline, columbite, cassiterite, topaz and beryl.

China is the largest consumption country, and also is the largest production base for lithium carbonate by Lepidolite. China Lepidolite is mainly located in Jiang Xi province. Due to the development of new energy vehicles, the market demand for lithium in China is very large. But because of the production process and the problem of waste generated, Lepidolite just occupied very small market share.

Over the next five years, LPI(LP Information) projects that Lepidolite will register a 30.0% CAGR in terms of revenue, reach US\$ 13 million by 2023, from US\$ 3 million in 2017.
