The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Linear Motion Systems market for 2018-2023.

Industrial machinery is prevalent among many different fields of industry. Linear motion is one of the basic mechanisms that design in the machinery. Linear motion utilizes sliding and rolling motions to transfer power and displacement into guiding linear-movement.

This mechanism is considered to be one of the most important factors in every industrial field.

Linear motion systems consist of linear rail, rail tables, guides, actuators, sliders, which help the manufacturing facility to continuously transfer products in a conveyor belt, or push it across for packaging.

Rising revenue from the replacement activities, high demand for linear motion systems in automotive industry and rapid industrialization in emerging countries are some of the key factors fueling the market growth. Meanwhile, demand for linear motion products in the electronics and electronics-assembly industries — particularly for battery manufacturing facilities and improved global economic conditions — have facilitated growth. However, lack of effective product differentiation is one of the major factors hampering the market growth.

With expected revenue of \$1778.68 million in 2018, China would be the largest regional market for linear motion products. The whole APAC region, owing to the rapid industrial development across countries such as China, India, South Korea, Indonesia, and

Taiwan, the linear motion systems market will post impressive growth in the coming years. Additionally, the growth of the automation segment will also fuel the demand for linear motion systems stock in this region.

Over the next five years, LPI(LP Information) projects that Linear Motion Systems will register a 7.3% CAGR in terms of revenue, reach US\$ 11300 million by 2023, from US\$ 7360 million in 2017.
