## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Liposome Drug Delivery (Liposomes Drug Delivery) market for 2018-2023.

Liposomes have been used to improve the therapeutic index of new or established drugs by modifying drug absorption, reducing metabolism, prolonging biological half-life or reducing toxicity. Drug distribution is then controlled primarily by properties of the carrier and no longer by physico-chemical characteristics of the drug substance only. In consideration of the global economic and pharma industry, the growth rate of Liposomes Drug Delivery market will keep high in the next several years. The revenue market size expected to be 3.6 billion USD in 2020 at a CAGR of 8.57%.

North America dominated the market with market share of 44.2% due to the high medical level. Following North America, Europe is the second largest market with market share of 36%. Asian Pacific regions are the third largest market with developed countries like Japan and many developing countries like China. Its market share is about 12.85%.

Liposomes have been used in a broad range of pharmaceutical applications. Liposomes are showing particular promise as intracellular delivery systems for anti-sense molecules, ribosomes, proteins/peptides, and DNA. Liposomes with enhanced drug delivery to disease locations, by ability of long circulation residence times, are now achieving clinical acceptance. Also, liposomes promote targeting of particular diseased cells within the disease site.

Finally, liposomal drugs exhibit reduced toxicities and retain enhanced efficacy compared with free complements. Based on the pharmaceutical applications and available products, we can say that liposomes have definitely established their position in modern delivery systems.

Over the next five years, LPI(LP Information) projects that Liposome Drug Delivery (Liposomes Drug Delivery) will register a 10.0% CAGR in terms of revenue, reach US\$ 4260 million by 2023, from US\$ 2400 million in 2017.
