A liquid lens uses one or more fluids to create an infinitely-variable lens without any moving parts by controlling the meniscus (the surface of the liquid.) There are two primary types, Electrowetting-Based Liquid Lense and Liquid Crystal Lense. These are not to be confused with liquid-formed lenses that are created by placing a drop of plastic or epoxy on a surface, which is then allowed to harden into a lens shape.

Varioptic accounted for 48.38% of the global Liquid Lenses production volume market share in 2016. Other players accounted for 18.99%, 12.00% individually, such as Edmund Optics and Optilux.
