Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lithium Bromide market for 2018-2023.

Lithium bromide is a chemical compound of lithium and bromine. Formula: LiBr. White cubic crystal or granular powder, easily soluble in water, soluble in alcohol and ether, slightly soluble in pyridine, it can soluble in methanol, acetone, ethylene glycol and other organic solvents. It is generally used in certain air conditioning systems.

Lithium bromide industry concentration is high; there are many manufacturers in the world, and they focused on China. Worldwide, giant manufactures mainly distribute in China and Germany. China has a long history and unshakable status in this industry. In the past five years, the production and capacity were decreasing but the growth rate is low. The lithium bromide is non-renewable energy resource and the production countries make relevant policies to ensure continuous use of lithium bromide.

The import and export percent of this industry is very high. Because almost every country uses lithium bromide and only few countries have lithium bromide. China export lithium bromide to USA, Southeast Asia and many other areas where they cannot produce lithium bromide.

Over the next five years, LPI(LP Information) projects that Lithium Bromide will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
