Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lithium Hydroxide market for 2018-2023. Lithium hydroxide is a compound formed of the white, soft metal lithium bound to a hydroxide group with the formula LiOH . It is commercially available in anhydrous form free of chemical bonds to water, though it is a hygroscopic chemical by nature that is also sold in monohydrate form as $\text{LiOH} \cdot \text{H}_2\text{O}$. The compound is used in a variety of industries with popular commercial demands for it in the manufacture of lithium batteries and as lithium hydroxide monohydrate to make lubricating greases.

The major raw materials for lithium hydroxide monohydrate are Lithium ore, HCl and others. Fluctuations in the price of the upstream product will impact on the production cost of lithium hydroxide monohydrate, and then impact the price of lithium hydroxide monohydrate. Additionally, the quality of raw materials would also impact the quality of lithium hydroxide monohydrate.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents a downward trend according to the economy development status. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Lithium Hydroxide will register a 10.3% CAGR in terms of revenue, reach US\$ 570 million by 2023, from US\$ 350 million in 2017.
