Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Locomotives (Rolling Stock) market for 2018-2023.

This report studies the Locomotives market. Locomotive is a rail transport vehicle that provides the motive power for a train. Locomotives use electricity to drive forward motion despite some locomotive named 'diesel'. In diesel locomotive, a large diesel engine turns a shaft that drives a generator which makes electricity. This electrical energy powers large electric motors at the wheels called 'traction motors'.

The global average price of Locomotives is in the decreasing trend, from 2.88 M USD/Unit in 2013 to 2.47 million USD/Unit in 2017. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of Locomotives includes Diesel Locomotive and Electric Locomotive. The proportion of Diesel Locomotive in 2017 is about 72.05%, and the proportion is in decreasing trend from 2013 to 2017 as the electric locomotive has more advantages. Asia Pacific is the largest consumption place, with a consumption market share nearly 40.65% in 2017. Following Asia Pacific, North America is the second largest consumption place with the consumption market share of 23.88%.

Over the next five years, LPI(LP Information) projects that Locomotives (Rolling Stock) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
