In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global LOW-E Glass market for 2018-2023.

Low emissivity coated glass is also called Low-E glass. Low-E glass is a kind of glass whose surface is coated with low emissivity coating silver and metal-oxide film so that the glass takes on different colors. Its main functions are to reduce the U value of glass, selectively reduce Sc and comprehensively improve energy saving property of glass. Its main features: high infrared reflectivity, ability to directly reflect far infrared thermal radiation, low surface emissivity, weak ability to absorb external energy, hence little reradiated heat energy; wide range of shading coefficient SC, and ability to control sun light transmittance according to needs to cater to requirements of different areas. It can be divided into high transmission low-E glass and sun shading low-E glass.

Although, double low-e glass holds the major percentage share in the total market and is projected to display a faster growth in the future, still market for triple low-e glass is also growing at higher pace. Among the regions, APAC holds the largest market share mainly due to growing regulations and infrastructural developments in the region. It is expected to grow at a faster pace during forecasted period.

Although the market competition of LOW-E Glass is fierce globally, there are many enterprises can obtain considerable profit from the manufacturing and marketing of LOW-E Glass and that is the reason that we believe there will also be enterprises enter this market.
