The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Low and Medium-voltage Inverter market for 2018-2023.

Low and Medium-voltage Inverter is an electronic device or circuitry that changes direct current (DC) to alternating current (AC). The input voltage, output voltage and frequency, and overall power handling depend on the design of the specific device or circuitry. The inverter does not produce any power; the power is provided by the DC source.

First, for industry structure analysis, the Low and Medium-voltage Inverter industry is relatively concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 55 % of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Low and Medium-voltage Inverter industry.

Second, for price trend analysis, a key variable in the performance of Low and Medium-voltage Inverter producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Third, for forecast, the global Low and Medium-voltage Inverter revenue would keep increasing with annual growth rate with 3~6%. We tend to believe that this industry still has a good future, considering the current demand of Low and Medium-voltage Inverter.

Over the next five years, LPI(LP Information) projects that Low and Medium-voltage Inverter will register a 4.3% CAGR in terms of revenue, reach US\$ 13500 million by 2023, from US\$ 10900 million in 2017.
