The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Low-speed vehicle market for 2018-2023.

A low-speed vehicle (LSV) is a legal class of 4-wheel vehicles that have a maximum capable speed typically around 25 mph (40 km/h), and have a minimum capable speed (typically 20 mph (32 km/h)) that allows them to travel on public roads not accessible to all golf carts or neighborhood electric vehicles (NEV). The vehicles operate under very similar restrictions to but without the specification of battery electric power. Low-speed electric vehicles (LSVs) are becoming more common on public roadways. Although small electric vehicles have been prevalent for many years on golf courses and as mobility aids, their manufacture for use on public roadways as a short range alternative to fossil-fueled autos has been increasing in recent years. The sale of LSVs is expected to increase significantly in the coming years due to increases in fossil fuel prices and new priorities for reducing dependence on fossil fuels, such as developing more sustainable transportation technologies and taking positive steps to reduce greenhouse gases.

Over the next five years, LPI(LP Information) projects that Low-speed vehicle will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
