In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Macrolide Antibiotics market for 2018-2023.

Macrolide antibiotics are a particular type of antibiotic used to treat, and sometimes prevent, a wide variety of bacterial infections. Macrolide antibiotics stop bacteria multiplying by preventing them from being able to produce proteins that are essential for their growth. The bacteria eventually die or are killed by your immune system. Macrolide antibiotics are used to treat infections caused by Gram-positive bacteria (e.g., *Streptococcus pneumoniae*) and limited Gram-negative bacteria (e.g., *Bordetella pertussis*, *Haemophilus influenzae*), and some respiratory tract and soft-tissue infections. The antimicrobial spectrum of macrolides is slightly wider than that of penicillin, and, therefore, macrolides are a common substitute for patients with a penicillin allergy.

Over the next five years, LPI(LP Information) projects that Macrolide Antibiotics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
