## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Maglev Wind Power Generator market for 2018-2023.

Maglev Wind Power Generator is a sort of mini wind turbine generator that used for small scale power systems such as street illumination and off-grid house power supply where power supply ranges from 300W-3kW is in need.

The market of Maglev power generator keeps steady in the recent few years.

Meanwhile the export volume has been increased due to the rising need of off grid power supply. Getting less support from the China government compared with solar industry and large wind turbine industry, the maglev wind turbine manufacturers are facing a shortage of domestic individual consumers. The manufacturers might consider building plants other than finding distributors in South East Asia.

China was the hometown of “Maglev” wind generator, which is an update of coreless disk generator. The competitiveness with the conventional disk generator is not obvious yet despite of the lower start up wind speed. Meanwhile the export volume keeps growing. Both reasons may ease the activity of foreign developers to introduce the technology and develop it.

Over the next five years, LPI(LP Information) projects that Maglev Wind Power Generator will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
