Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Magnesium Ethoxide market for 2018-2023. Solid magnesium ethoxide is used as the reactant for the synthesis of Ziegler Natta catalysts used for olefin polymerization. Magnesium Ethoxide or MgE is a common Ziegler and Ziegler-Natta catalyst precursors. Magnesium ethoxide is used as olefin polymerization catalyst carrier for polypropylene, polyethylene and precision ceramic materials.

At present, the global magnesium ethoxide market is highly concentrated. Magnesium ethoxide downstream industry is mainly polyethylene and polypropylene. In 2016, polyethylene holds 87% downstream applications.

At present, there are several manufacturers in China capable of producing low quality magnesium ethoxide. Dezhou Longteng Chemical products do not getting the trust from downstream customers. As a result, Dezhou Longteng Chemical's sales are very small. In addition, several companies in China are developing this product. Shandong kaiyue Chemical and Linyi Zhenfeng Chemical are potential entrants. At present, the two companies are developing high-quality magnesium ethoxide. In the future, Chinese manufacturers are likely to create high-quality products. At this stage, compared with Evonik products, these companies' products have a big gap.

Over the next five years, LPI(LP Information) projects that Magnesium Ethoxide will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
