Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Magnesium Oxide market for 2018-2023. Magnesium oxide, also called magnesia with chemical formula MgO, is a white solid mineral that occurs naturally as periclase and is a source of magnesium. MgO is used as an insulator in industrial cables, as a basic refractory material for crucibles and as a principal fireproofing ingredient in construction materials. Magnesium oxide is also utilized in the agricultural, chemical, food, pharmaceutical, environmental and industrial applications.

Magnesium oxide consumption is linked to a handful of generally steady end markets. As a key refractory mineral, its usage is correlated to steel and cement manufacturing, while as an ingredient in markets ranging from flame retardants and water treatment to human medicine and animal feed, small but stable annual demand volumes keep the industry ticking over. Based on the regions, the consumption is mainly concentrated in Asia-Pacific, Europe and North America etc. China was the major consumption region with the market share of 47.37% in 2017, which attributed to the rapid economic growth in China. Europe was the second consumer in the magnesium oxide industry, which accounted for around 23.26% market share in 2017.

Over the next five years, LPI(LP Information) projects that Magnesium Oxide will register a 7.0% CAGR in terms of revenue, reach US\$ 6250 million by 2023, from US\$ 4170 million in 2017.
