In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Magnetic Flow Meters market for 2018-2023.

Magnetic flow meter, also technically an electromagnetic flow meter or more commonly just called a mag meter. A magnetic field is applied to the metering tube, which results in a potential difference proportional to the flow velocity perpendicular to the flux lines. Magnetic flow meters face problems with the electrodes corroding while in contact with the conductive fluids in the pipe. Depending on the application, such as pharmaceutical and food industry demand for high sanitation, thus, various sensors are equipped with the electromagnetic flow meters to offer desired characteristics pertaining to an application.

Over the next five years, LPI(LP Information) projects that Magnetic Flow Meters will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
