In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Managed Pressure drilling market for 2018-2023.

Managed Pressure Drilling (MPD) is defined by the International Association of Drilling Contractors (IADC) as “an adaptive drilling process used to more precisely control the annular pressure profile throughout the wellbore.” The objectives of MPD are “to ascertain the downhole pressure environment limits and to manage the annular hydraulic pressure profile accordingly.”

Drilling with MPD gives operators the ability to rapidly adjust bottom hole pressure to reducing non-productive time (NPT) risks associated with mitigating kicks, losses and wellbore stability issues. With MPD operators can decrease bottom hole pressure related NPT, reducing drilling days and improving overall economic viability of well construction.

Over the next five years, LPI(LP Information) projects that Managed Pressure drilling will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
