In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Manual Resuscitator market for 2018-2023. Manual resuscitator is a hand-held device commonly used to provide positive pressure ventilation to patients who are not breathing or not breathing adequately. The device is a required part of resuscitation kits for trained professionals in out-of-hospital settings (such as ambulance crews) and is also frequently used in hospitals as part of standard equipment found on a crash cart, in emergency rooms or other critical care settings. North America is the largest sales place, with a sales market share nearly 28.7% in 2017. The demand for resuscitators in North America is expected to witness growth owing to the increasing cases of cardiac arrest and neonatal ventillation.

Over the next five years, LPI(LP Information) projects that Manual Resuscitator will register a 4.0% CAGR in terms of revenue, reach US\$ 540 million by 2023, from US\$ 430 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Manual Resuscitator market by product type, application, key manufacturers and key regions.
