In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Marine Diesel Engine market for 2018-2023. Marine Diesel Engine is an internal combustion engine in which ignition of the fuel that has been injected into the combustion chamber is caused by the high temperature which a gas achieves when greatly compressed in marine ship. As the core of the ship equipment, according to their effects, marine diesel engine can be divided to host and auxiliary engines. The host engine is for the ship's propulsion, the effects of auxiliary engine are to drive a generator, an air compressor or a water pump.

Marine diesel engine is an internal combustion engine in which ignition of the fuel that has been injected into the combustion chamber is caused by the high temperature which a gas achieves when greatly compressed in marine ship.

The marine diesel engine is highly concentrated, the production of top sixteen manufacturer account 90% of global production, and high-end products mainly come from China and Korea.

In the world wide, the plants of major manufactures mainly distribute in China and Korea, like Wartsila, has a number of plants around the world, particularly in China and Korea, taking a leading share in these areas.
