## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Marine Electric Vehicle market for 2018-2023.

The adoption of electric vehicles has increased considerably as they produce lower carbon emissions than fuel-powered vehicles. In addition, scarcity of fuel reserves has shifted the demand for the use of alternative energy sources, which in turn, propels the ships and boats market.

Since the energy crises of the 1970s, interest in this quiet and potentially renewable marine energy source has been increasing steadily again, especially as solar cells became available, for the first time making possible motorboats with an infinite range like sailboats. The first practical solar boat was probably constructed in 1975 in England. The first electric sailboat which made a round-the-world tour, including the through the Panama Canal, with only green technologies is EcoSailingProject.

Over the next five years, LPI(LP Information) projects that Marine Electric Vehicle will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
