## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Marine Engine Fuel Injection System market for 2018-2023.

The common rail system, as the name suggest, is a system which is common for every cylinder or unit of the marine engine. Marine engines of the early times had a fuel system, wherein each unit had its own jerk pump and the oil pressure was supplied through the jerk pumps.

In the last several years, the development of marine fuel injection system industry is steady. Growth of the shipbuilding industry and increasing international maritime trade are the major factors driving the market. Moreover, stringent emission norms imposed by International Maritime Organization would also boost the demand for new marine fuel injection.

Commercial vessel applications have the most powerful and high capacity marine engines compared to other applications. Commercial vessels contribute about 59% to the global marine fuel injection system market in 2016, followed by inland waterways vessels and offshore support vessels. With rise in international sea borne trade, the demand for commercial vessels is increasing, driving the marine fuel injection market. Meanwhile, as China, South Korea, Japan, and Indonesia are the major manufacturing countries of commercial vessels; the demand for fuel injection systems is more in these countries.

Due to the stricter emission policies, High Press Common Rail Injection System is the more and more popular due to the sufficient burning. The market share of common rail injection system was about 52.6% in 2016 and the figure is expected to be higher in the next several years.

Over the next five years, LPI(LP Information) projects that Marine Engine Fuel Injection System will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
