In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Master Alloy market for 2018-2023.

Master alloy is a base metal such as aluminium, copper and other products, which combines with a certain percentage of one or two other elements. It is a semi-finished product and is produced in various shapes (ingot, waffle plate, rod in coils, etc).

The key raw materials of master alloy are nonferrous metals, such as aluminium, copper, vanadium, titanium, niobium, and so on. The price fluctuations of raw materials will impact the master alloy industry directly and deeply. The price of master alloys shows continuous down trend in the recent few years. Moreover, the price level varies largely according to the ingredients of master alloys.

Over the next five years, LPI(LP Information) projects that Master Alloy will register a 0.1% CAGR in terms of revenue, reach US\$ 3340 million by 2023, from US\$ 3310 million in 2017.
