Tenderness is a quality of meat gauging how easily it is chewed or cut. Tenderness is a desirable quality, as tender meat is softer, easier to chew, and generally more palatable than harder meat. Consequently, tender cuts of meat typically command higher prices. The tenderness depends on a number of factors including the meat grain, the amount of connective tissue, and the amount of fat. Tenderness can be increased by a number of processing techniques, generally referred to as tenderizing or tenderization.

Tenderizers or tenderizing agent that is in the form of naturally occurring enzymes can be added to food before cooking. Examples of enzymes used for tenderizing: papain from papaya, bromelain from pineapple and actinidin from kiwifruit.

Over the next five years, LPI(LP Information) projects that Meat Tenderizing Agents will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
