Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Medical Billing market for 2018-2023.

Medical billing is a payment practice within health system. The process involves a healthcare provider submitting, and following up on, claims with health insurance companies in order to receive payment for services rendered; such as treatments and investigations. The same process is used for most insurance companies, whether they are private companies or government sponsored programs. Medical coding reports what the diagnosis and treatment were, and prices are applied accordingly.

Many software companies have arisen to provide medical billing software to this particularly lucrative segment of the market. Several companies also offer full portal solutions through their own web-interfaces, which negates the cost of individually licensed software packages. Due to the rapidly changing requirements by U.S. health insurance companies, several aspects of medical billing and medical office management have created the necessity for specialized training.

Over the next five years, LPI(LP Information) projects that Medical Billing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares and growth opportunities of Medical Billing market by product type, application, key companies and key regions.
