In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Medical Computer Cart market for 2018-2023. Medical Computer Cart is designed to ease the workload for nurses and other healthcare professionals, as well as to enhance patient care. Medical computer carts are used in a variety of application including charting and EMR, medication dispensing, and nursing education. Medical computer carts are available with or without on-board power systems. Medical computer carts come with adjustable features like height setting for standing or sitting use.

Medical computer carts can be defined as medical carts used by medical staff for several day to day activities such as checking electronic medical records, distributing drugs, charting and EMR, medication dispensing, and nursing education. These are suitable for large hospitals, health clinics, pharmacies, and psychiatric hospitals. The prevalence rate of Medical Computer Carts is small. Production and consumption areas are both concentrated in North America and Europe. In 2016, the Sales market share rate of North America and Europe are 31% and 27%.

Integrated medical trolley is new product, and the prevalence rate is very small. And they would have fire potential due to their batteries. But we have reasons to believe that integrated medical trolley is the development trend of the future. More and more electronic companies enter into this market. Traditional trolley companies need to cooperate with electronic companies to occupy and expand market share.

Over the next five years, LPI(LP Information) projects that Medical Computer Cart will register a 9.3% CAGR in terms of revenue, reach US\$ 510 million by 2023, from US\$ 300 million in 2017.
