In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Medical Cyclotron market for 2018-2023. Medical Cyclotron is a cyclotron that is a type of compact particle accelerator used to produce quantities of radioactive isotopes called positron emitters. Stable, non-radioactive isotopes are put into the cyclotron which accelerates charged particles to high energy in a magnetic field. The stable isotopes then react with a beam to form radioactive isotopes, which are then taken from the cyclotron, transformed into positron-emitting radiopharmaceuticals (PERs) within the facility's laboratories and are delivered to nuclear medicine where they are used for imaging procedures. Cyclotrons are a clean nuclear technology and create very little radioactive waste as a result of their operation.

The leading manufactures mainly are IBA, GE, Siemens, Sumitomo and ACSI. IBA is the largest manufacturer; its revenue of global market exceeds 18% in 2016. The next is GE and Siemens.

There are mainly two type product of medical cyclotron market: low energy medical cyclotron and high energy medical cyclotron. High energy medical cyclotron accounts the largest proportion.

Geographically, the global medical cyclotron market has been segmented into North America, Europe, Asia Pacific and other. The Asia Pacific held the largest share in the global medical cyclotron products market, its revenue of global market exceeds 31% in 2016. The next is Europe and North America.

Over the next five years, LPI(LP Information) projects that Medical Cyclotron will register a 4.5% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$
