# **Abstracts**

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Medical Device Connectivity market for 2018-2023.

Medical Device Connectivity is the establishment and maintenance of a connection through which data is transferred between a medical device, such as a patient monitor, and an information system.

Medical devices may be connected on wireless and wired networks. Wireless networks, including Wi-Fi, Wireless Medical Telemetry Service, and Bluetooth, provide more ubiquitous coverage of connectivity, allowing uninterrupted monitoring of patients in transit. Wired networks are fast, stable, and highly available. Wired networks are usually more costly to install at first and require ongoing costs for maintenance, but allow connectivity of the organization in a closed environment.

In this report we only include equipment for Medical Device Connectivity not include Software and services.

Market competition is not intense. Cisco Systems, Qualcomm, Philips Healthcare, Infosys, Cerner, TE, GE, Digi International etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.

Over the next five years, LPI(LP Information) projects that Medical Device Connectivity will register a 24.6% CAGR in terms of revenue, reach US\$ 6040 million by 2023, from US\$ 2010 million in 2017.
