The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Membrane Filtration market for 2018-2023.

This report studies the Membrane Filtration market. Membrane Filtrations or "membranes" are polymer films with specific pore ratings. Membranes retain particles and microorganisms that exceed their pore ratings by acting as a physical barrier and capturing such particles on the surface of the membrane.

The Membrane Filtration industry has many manufacturers in the world, and high-end products mainly from U.S. and Western European.

Membrane Filtration can be divided into the following categories, reverse osmosis membrane, microfiltration membrane, ultrafiltration membrane and nanofiltration membrane, of which, reverse osmosis membrane is the most important type of application, accounting for 43.6% of the global membrane separation market in 2016.

This proportion is higher in underdevelopment areas such as China.

Inorganic Membrane products market is rarely small compare to the Organic Membrane products. Inorganic product is dominated by ceramic membrane, and its price is 4-8 times higher than that of PVDF products, and usually used in the acid and alkali resistant environment, like pharmaceutical industry.

Over the next five years, LPI(LP Information) projects that Membrane Filtration will register a 6.9% CAGR in terms of revenue, reach US\$ 7030 million by 2023, from US\$ 4710 million in 2017.
