Metal bellows are elastic vessels that can be compressed when pressure is applied to the outside of the vessel, or extended under vacuum. When the pressure or vacuum is released, the bellows will return to its original shape. Because of its properties, Metal bellows as the sensing element, the damping element, non-concentric axial transmission elements, compensation elements, sealing components, valve components and pipe fittings, widely used in automatic control and instrumentation, vacuum technology, mechanical industry, power industry, transport and atomic energy industry and other fields.

Regionally, China is the biggest Consumption area of Metal Bellows in the world and Europe (EEA and central Europe) is the most potential market with the fastest growing rate of 2.65%.

From the view of application market, 54.72% is the most active and potential field because of the widely use of automotive in 2015.
