In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Metal Expansion Joints market for 2018-2023. Metal expansion joints (also called compensators) are compensating elements for thermal expansion and relative movement in pipelines, containers and machines. They consist of one or more metal bellows, connectors at both ends, and tie rods that depend on the application. They are differentiated according to the three basic types of movement: axial, angular and lateral expansion joints.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Metal Expansion Joints industry in short supply on the market in the past few years, more and more companies enter into Metal Expansion Joints industry, the current demand for Metal Expansion Joints product is relatively low, lack of demand, excess supply. Ordinary Metal Expansion Joints products on the market do not sell well; Industrial Metal Expansion Joints' price is lower than past years. The signal of market price change indicates the trend in the Metal Expansion Joints industry, low-end product has excess capacity; high-end product is in short supply.

Metal Expansion Joints product demand market there is also a certain space, but basically showing the scarcity of high-end products, low-end products, excess capacity, there is a large market demand for high-end products to seize market share of imports acts, local enterprises export more low-end products overcapacity or molding process basic Materials.
