Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Metal Waste and Recycling market for 2018-2023.

Metal Scrap includes ferrous scrap and non-ferrous scrap.

Iron and steel scrap, also referred to as ferrous scrap, comes from end of life products (old or obsolete scrap) as well as scrap generated from the manufacturing process (new, prime or prompt scrap). Obsolete ferrous scrap is recovered from automobiles, steel structures, household appliances, railroad tracks, ships, farm equipment and other sources.

Nonferrous metals, including aluminum, copper, lead, nickel, tin, zinc, and others, are among the few materials that do not degrade or lose their chemical or physical properties in the recycling process. As a result, nonferrous metals have the capacity to be recycled an infinite number of times.

Metals are among the first materials to be captured in the recycling process. They are a great recyclable because of their high value, metal density lends to efficiency in transport, and the properties of metals allow them to be recycled again and again. The scrap metal recycling in the United States is to be a \$26.83 billion industry in 2018, and metal recyclers in the U.S. handle about 120 million tons of recyclables each year. Some of these major recyclables are iron, steel, aluminum, copper, lead, and zinc. Scrap metal is generated as a by-product of industrial manufacturing, construction and demolition, and the disposal of obsolete metal products. It is a continuous resource made from appliances, buildings, bridges, airplanes, old cars and more. Scrap metal is truly one of our most precious resources because it will never be depleted, and it can be remelted and reshaped into new products countless times.

The global Metal Recycling market is volume at 612619 K MT in 2017 and is expected to reach 688044 K MT by the end of 2025, growing at a CAGR of 1.46% between 2017 and 2025.

Over the next five years, LPI(LP Information) projects that Metal Waste and Recycling will register a 2.9% CAGR in terms of revenue, reach US\$ 340600 million by 2023, from US\$ 287600 million in 2017.
