In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Metallic Stearates Hydrophobic Agent market for 2018-2023.

Metallic stearates are mainly refers to zinc stearate, calcium stearate, barium stearate, magnesium stearate, lead stearate, aluminum stearate and etc. In fact, calcium stearate is also the largest type for dry-mix mortar use. At present, metallic stearates are mainly used for painting and plastic industry. Most of companies have mastered this technology. In the construction industry, metallic stearates are the most widely used and inexpensive hydrophobic agents.

QYR believes that the application of the construction industry only occupies a small share of the application of metallic stearates. Unlike other products, the industry's manufacturers are highly fragmented and highly competitive. Globally, only a few companies, such as Baerlocher and Peter Greven, have applied the application of hydrophobic agents as an important development direction.

Over the next five years, LPI(LP Information) projects that Metallic Stearates Hydrophobic Agent will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
