In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Metallocene Catalyst market for 2018-2023.

This report studies the Metallocene Catalyst market, Metallocene catalysts are the combination of a transition metal and cyclopentadienyl. It is a molecular structure with a well-defined single catalytic site, consisting of an organometallic coordination compound in which one or two cyclopentadienyl rings (with or without substituents) are bonded to a central transition-metal atom; used to produce uniform polyolefins with unique structures and physical properties.

Metallocene catalysis is a rich and fertile technology with major implications for the polyolefins industry.

Geographically, among current producers in global, North America and Asia Pacific have the largest consumption of metallocene catalyst. North America accounts for 49.04% of the consumption market share during 2017 and is predicted to retain its leadership until the end of 2023. Asia Pacific is the second largest leader with the production market share of 34.48% in 2017.

By application, metallocene catalyst market is segmented into metallocene polyethylene (PE) and metallocene polypropylene (PP) application. The metallocene polyethylene (PE) sector dominates the market during 2017 with a market share of 72.78%. This research report predicts this segment to grow at a CAGR of around 5.97% during the forecast period. Other downstream fields such as metallocene polypropylene (PP) application take account for about 7.02% in 2017.

Over the next five years, LPI(LP Information) projects that Metallocene Catalyst will

register a 6.8% CAGR in terms of revenue, reach US\$ 470 million by 2023, from US\$ 310 million in 2017.
