Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Metallocene Polyethylene market for 2018-2023.

Metallocene Polyethylene is prepared by means of metallocene catalysts, usually including copolymers. Metallocene polyethylene has a relatively narrow molecular weight distribution, exceptionally high toughness, excellent optical properties and a uniform comonomer content. Because of the narrow molecular weight distribution it behaves less pseudoplastic (especially under larger shear rates). Metallocene polyethylene has a low proportion of low molecular weight (extractable) components and a low welding and sealing temperature.

Metallocene polyethylene mainly has three types, which include mLLDPE, mHDPE, mLDPE and other types. And each type has application industries relatively. With growth of packaging market, the downstream application industries will need more metallocene polyethylene. So, metallocene polyethylene has a huge market potential in the future.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, there is fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Metallocene Polyethylene will register a 1.2% CAGR in terms of revenue, reach US\$ 21900 million by 2023, from US\$ 20400 million in 2017.
