In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Methanol market for 2018-2023.

Methanol is also known as wood alcohol with the formula CH_3OH . Modern-day methanol production occurs in a catalytic industrial process directly from carbon monoxide, carbon dioxide and hydrogen. It is mainly used to produce formaldehyde, acetic acid, methyl chloride, methyl amine and dimethyl sulfate and other organic products.

First, in recent years, with the rise in international crude oil prices, the demand of methanol is growing rapidly. Many Companies pay attention to the methanol as new energy. In chemical production, methanol can be used to produce formaldehyde, acetic acid, methyl chloride, methylamine, methyl tert-butyl ether (MTBE), polyvinyl alcohol (PVA), dimethyl sulfate, dimethyl terephthalate (DMT), dimethyl ether, methyl acrylate, methyl methacrylate.

Second, China has abundant coal resources, coal chemical industry. With the steady development of formaldehyde, acetic acid and other traditional downstream industries, China's methanol demand continues to improve. Giant manufactures are mainly concentrated in China, the output of this region occupy global production more than 50%. With the raw material changes, the global methanol average price is in the increase trend. The global methanol production shows an increasing trend.

Third, China to import large quantities of methanol situation will not soon be reversed. Therefore, methanol in the procurement process, we should pay attention to analyze market factors at the time, not to keep high inventories.

Over the next five years, LPI(LP Information) projects that Methanol will register a xx%

CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
