Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Methyl Ethyl Ketone (MEK) market for 2018-2023.

Methyl Ethyl Ketone (MEK), also called 2-Butanone, is a colorless fairly volatile liquid with a pleasant pungent odor, C₄H₈O. The primary use of methyl ethyl ketone (MEK) is as a solvent in processes involving gums, resins, cellulose acetate, and cellulose nitrate. Methyl Ethyl Ketone (MEK) is also used in the synthetic rubber industry, in the production of paraffin wax, and in household products such as lacquer and varnishes, paint remover, and glues.

Major manufacturers of methyl ethyl ketone (MEK) are mainly in US, EU, Japan and China. The main production is gradually shifted to China.

There are less than 10 large manufacturers all over the world and methyl ethyl ketone (MEK) is produced industrially in large quantities. However, methyl ethyl ketone (MEK) business may not expand because of the effect of raw material cost and technology. Since the earthquake of Japan and the unexpected stop of Shell methyl ethyl ketone (MEK) equipment, China is becoming a driver of methyl ethyl ketone (MEK) market in international trade.

Over the next five years, LPI(LP Information) projects that Methyl Ethyl Ketone (MEK) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
