In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Microarray Analysis market for 2018-2023.

A microarray is a multiplex lab-on-a-chip. It is a 2D array on a solid substrate (usually a glass slide or silicon thin-film cell) that assays large amounts of biological material using high-throughput screening miniaturized, multiplexed and parallel processing and detection methods. The concept and methodology of microarrays was first introduced and illustrated in antibody microarrays by Tse Wen Chang in 1983 in a scientific publication and a series of patents.

Types of microarrays include DNA microarrays, MMChips (for surveillance of microRNA populations), Protein microarrays, Peptide microarrays (for detailed analyses or optimization of protein-protein interactions) and Tissue microarrays, etc.

Over the next five years, LPI (LP Information) projects that Microarray Analysis will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
