The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Micronized PTFE market for 2018-2023.

Micronized PTFE, also known as PTFE micro powder, is low molecular weight, micronized white particle. It is used where higher surface lubricity and anti-blocking properties are required. Micronized PTFE is prepared by the utilization of PTFE resin or TFE monomer. At present, the main industrialization process is resin degradation using the virgin or recycled PTFE scrap.

Micronized PTFE is low molecular weight, micronized white particle and the particle size is around 3-20 um in diameter. They are additives in polymers, inks, or paintings which offer the great abilities to against friction, chemical resistance and the role as an insulator.

The micronized PTFE industry is relatively concentrated. There is increasing demand for high-end products.

The global consumption of micronized PTFE increased from 13840 MT in 2012 to 16129 MT in 2016 at an average annual growth rate of more than 3.9%. USA is the biggest consumption region with the consumption market share of 26.91% in 2016, followed by China. The top five players are: Solvay, Daikin, Shamrock Technologies, 3M and Chemours?DuPont). Tianyuxiang is the China leader. In the next five years, the global consumption of micronized PTFE will maintain 4.29% average annual growth rate.

Over the next five years, LPI(LP Information) projects that Micronized PTFE will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
