In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Military Airborne Collision Avoidance Systems market for 2018-2023.

An airborne collision avoidance system (ACAS) operates independently of ground-based equipment and air traffic control in warning pilots of the presence of other aircraft that may present a threat of collision. If the risk of collision is imminent, the system initiates a maneuver that will reduce the risk of collision. ACAS standards and recommended practices are mainly defined in annex 10, volume IV, of the Convention on International Civil Aviation. Much of the technology being applied to both military and general aviation today has been undergoing development by NASA and other partners since the 1980s.

Modern aircraft can use several types of collision avoidance systems to prevent unintentional contact with other aircraft, obstacles, or the ground Airborne Radar, Traffic collision avoidance system (TCAS), Portable Collision Avoidance System (PCAS), FLARM, Ground proximity warning system (GPWS), Terrain awareness and warning system (TAWS), Synthetic vision and Obstacle Collision Avoidance System.

Over the next five years, LPI(LP Information) projects that Military Airborne Collision Avoidance Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
