In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Military Aircraft Washing Equipment market for 2018-2023.

Aircraft cleaning is an essential aspect of aircraft preventative maintenance and can be considered as an important part of an aircraft's corrosion prevention & control program (CPCP).

The US Navy has established a requirement for washing all aircraft within a 300-mile radius of sea water or for aircraft flying below 3000' over sea water. This is mandatory regardless of wash type whether it be manually done or through a fully automated rinse package.

Corrosion is a pervasive enemy that degrades military vehicles, particularly aircraft. It occurs when salt, dirt, dust and other contaminate builds up on the outer surface of those vehicles. As they build up, all of those corrosive particles are hard at work, progressively wearing away at components, compromising the vehicle's integrity. A great deal of the high-technology; high-cost equipment maintained by the military is used in environments that are associated with particularly high rates of corrosion. The rates of corrosion in these areas are amplified if the proper preventative measures are not taken. Saltwater in particular is known to have a harmful effect on any aircraft flying over or adjacent to large bodies of open water. So, regular washing not only keeps equipment clean, it helps troops safe.

The market of military aircraft washing equipment includes manual and automatic airplane wash systems and the proportion of manual system in 2017 is about 76%, and

the proportion of automatic wash systems is 24%.
Over the next five years, LPI(LP Information) projects that Military Aircraft Washing Equipment will register a 2.7% CAGR in terms of revenue, reach US\$ 46 million by 2023, from US\$ 39 million in 2017.
