In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Milled FerroSilicon market for 2018-2023. FerroSilicon is a ferroalloy, an alloy of iron and silicon with an average silicon content between 15 and 90 weight percent. Milled FerroSilicon is made by ferrosilicon with a milling process.

The technical barriers of Milled Ferrosilicon are low, and the Milled Ferrosilicon manufacturing bases concentration degree is relatively higher; about 36.91% of global Milled Ferrosilicon are consumption in China 2016.

In the past few years, as the main raw material price was relatively stable and downstream demand weakened, with the addition of a stable increase in production capacity, expected that the Milled Ferrosilicon raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and employee wages, will play a significant role in promoting the cost of Milled Ferrosilicon.

There are companies adding new technology and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality.

Over the next five years, LPI(LP Information) projects that Milled FerroSilicon will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
