## Abstracts

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Minimally-Invasive Cosmetic Procedures market for 2018-2023.

Cosmetic surgery has increased dramatically in popularity over the past several years. People's attitudes toward signs of aging have changed. More and more are accepting the cosmetic surgery alternative. Cosmetic surgery has undergone significant technological and conceptual changes. Conceptual changes have altered the approaches to facial aging in the forehead, eyelids, and lower face. Technological changes include the use of lasers for facial cosmetic surgery, and minimally invasive techniques for face, breast, and body-contouring surgery.

Plastic surgeons also provide options for correcting certain signs of aging — such as crow's feet, frown lines, and forehead wrinkles — in small steps, without surgery. Because these procedures are done over a period of one or more short office visits, these mini-treatments are sometimes referred to as 'lunchtime' procedures, including Botulinum Toxins, Soft Tissue Fillers, Chemical Peel, Laser Hair Removal and Microdermabrasion.

Over the next five years, LPI(LP Information) projects that Minimally-Invasive Cosmetic Procedures will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
