The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Minimally Invasive Surgery Devices market for 2018-2023.

Minimally invasive procedures (also known as minimally invasive surgeries) have been enabled by the advance of various medical technologies. Surgery by definition is invasive and many operations requiring incisions of some size are referred to as open surgery.

The geographic segments included in this report are the North America, Europe, Asia-Pacific, and the Rest of the World (RoW). North America is further segmented into the U.S. and Canada. North America accounted for the largest share of this market in 2015, while Asia-Pacific is expected to grow at the highest rate. With rising geriatric population, presence of a large patient pool undergoing surgical treatments, growing awareness about modern surgical instruments and techniques, and implementation of various initiatives to reduce the rising healthcare expenditure in Asia-Pacific, the demand for minimally invasive surgical instruments in this region is expected to grow, which in turn will compel the key players to expand their geographical presence in this region.

Over the next five years, LPI(LP Information) projects that Minimally Invasive Surgery Devices will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
