In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Multilayer Printed Circuit Board (Multilayer Printed-wiring Board) market for 2018-2023.

Multilayer PCB is made up of three or more conductive layers(copper foil layer), these layers are pressed together and form multilayer PCB. Copper foil layer is bonded together by PP(prepreg), Multilayer PCB is one of the most complex types in printed circuit board.

Most PCB manufacturers are finding the demand for multilayer boards increasing by leaps and bounds. This growing demand is fed by the need for smaller, lighter boards for use in electrical devices, military equipment, healthcare miniaturization, and an expanding market for smart devices incorporated in home automation systems.

Smartphones and computers are perfect applications for multilayer PCBs with their need for compactness and light weight, yet sophisticated functionality.

Within the PCB market, the communication industry is expected to remain the largest market. Continuous innovations in smartphones and increasing demand from emerging economies are expected to spur growth for this segment over the forecast period.

Over the next five years, LPI(LP Information) projects that Multilayer Printed Circuit Board (Multilayer Printed-wiring Board) will register a 1.9% CAGR in terms of revenue, reach US\$ 25700 million by 2023, from US\$ 23000 million in 2017.
