## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Nano Composite Zirconia market for 2018-2023.

Composite zirconia refers to the composites of zirconium oxychloride and rare earth. According to the different formulations, the proportion of rare earth in the composites always changes. Yttrium oxide is most popular rare earth used in the composite, others also include lanthanum oxide and cerium carbonate and so on. It is a white powder. Nano zirconia, also ZrO<sub>2</sub> nanoparticle, is white powder of high purity. It appears oblique crystal at low temperature and shows tetragonal crystal formation at high temperature. When at high temperature, it has electrical conductivity and good strength and toughness. Nano ZrO<sub>2</sub> also possesses good mechanical, thermal, electrical and optical properties.

Nano composite zirconia is widely used in grinding medium, oxygen sensor, optical fiber connector, artificial teeth and so on. With increasing demand from downstream industry, nano composite zirconia production shows continuous upward trend in the recent few years. Saint-Gobain, Daiichi Kigenso Kagaku Kogyo, Tosoh, Guangdong Orient and so on are among of key players in nano composite zirconia industry. In addition, there is no doubt that Saint-Gobain is the largest manufacturer of nano composite zirconia in the world and is also the symbol of high quality nano composite zirconia.

Over the next five years, LPI(LP Information) projects that Nano Composite Zirconia will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
