The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Nanoparticle Analysis market for 2018-2023. Nanoparticle Analysis utilizes the properties of light scattering to detect the partial size distribution, zeta potential, molecular weight, etc. of samples, and can be used to analyze samples of nanoparticle, colloform, emulsion, submicron suspension, etc. The light scattered by the particles is captured using a CCD or EMCCD camera over multiple frames. Computer software is then used to track the motion of each particle from frame to frame.

Nanoparticle Analysis is used widely in the chemistry, medicine, machinery, and materials science industry; it is mainly used in measuring of particle size, particle concentration, protein aggregation and Zeta potential. In 2014, the global production was about 3799 units.

Now, the leading manufacturers of Nanoparticle Analysis located in the US, EU and Japan, such as Malvern Instruments (UK), occupied 19.35% market share in 2014, followed by Danaher (US), Brookhaven (US) and Sympatec (DE), who respectively occupied 14.21%, 11.11%, and 8.42% market share in 2014, thus the four leading companies hold above 53% market share in the world market. There is a big gap between domestic and abroad companies; the major companies include Winner, Bettersize, and JNGX in China.

According to analysis team's research, the US is the largest consumption country, accounting for 37% market, followed by the EU regions. Because of technology limited, China is the largest import country.

Over the next five years, LPI(LP Information) projects that Nanoparticle Analysis will

register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
